This document provides a complete electrical schematic of the development system. Such devices have been designed carefully and due attention has been paid to choosing components. This is why the most important parts of the system are manufactured in SMD (Surface Mount Device) technology. Besides, the components are mounted by machines of the last generation using lead-free alloy for soldering. What we have now as a result is a high-quality and reliable product that meets the world’s highest standards being applied in electronics industry and environmental protection.
